Hanging bin

60131

Description: Self-supporting, curved stainless steel outer walls, connected to stable flat side panels. Curved door with recessed lock (a key is supplied with each container). The door retention profile prevents the hinges from overstretching. A curved cover is firmly connected to the structure. The shape of the cover results in reduced height from two sides. A sturdy insertion ring guides waste into the inner liner.

A U-shaped profile on the back and underneath, for universal attachment to round and square posts, increases stability.

Safety: The curved cover serves as rain protection without providing a storage area. At the same time, the opening is reduced, which minimizes the disposal of household refuse bags. Snap locks protect the bins against unauthorized access.

Handling: Use the square key to operate (1/4 turn) the embedded snap lock and open the door. Pull out / lift out inner liner respectively remove the bag from the bag holder. The contents are now visible and the waste bag can be replaced as required. The snap lock allows the door to be closed and locked without a key.

Cleaning: The brushed stainless steel surface makes the boxes easy to clean and maintain. Commercial care products for stainless steel grade 1.4301 are sufficient.
