## SPECIAL

### Transparent recycling bin FT3

**Description:** Self-supporting, curved fronts with integrated transparent acrylic panels and straight stainless steel side panels, secured with an internal construction made of galvanized steel, provide stability. The funnel-shaped openings of the top guide waste into the inner liners.

**Safety:** A snap lock protects the bin against unauthorized access and secures removable accessories (if required) against theft.

**Handling:** Quick and easy removal of the waste bags from above. The top part of the bin automatically swivels upwards by means of a gas spring after operating the lock (1/4 turn). The contents are now visible and the waste bags can be replaced as required.
